Build an AI-Powered Research Assistant using Clay

AI-Powered Company Research & Outreach using Clay

Objective

The objective of this assignment is to help students learn how to use Clay AI for data collection, enrichment, AI-powered research, and personalized content generation.

By the end of this assignment, students should be able to:

- Create and manage a Clay table.
- Import and organize data.
- Use AI prompts inside Clay.
- Enrich company information.
- Generate AI-powered insights.
- Create personalized outreach messages.

Scenario

Imagine you have joined a startup as a Business Development Intern. Your manager has asked you to identify companies that could benefit from AI solutions and prepare personalized outreach.

Use Clay AI to complete the following tasks.

Task 1: Create a Clay Table

Create a new table in Clay.

Add the following columns:

- Company Name
- Website
- Industry
- Country

- Company Size

Populate the table with **15–20 companies** of your choice.

Task 2: Data Enrichment

Use Clay's enrichment tools to add the following information for each company:

- Company Description
- LinkedIn Company Page
- Employee Count
- Founder/CEO Name
- Business Email (if available)

If any information is unavailable, mention **"Not Found."**

Task 3: AI Company Analysis

Using Clay AI, create the following AI-generated columns:

1. What does the company do? (Maximum 50 words)
2. One business challenge the company might face.
3. One AI solution that could help the company.
4. Why would this company benefit from AI?

Task 4: Personalized Outreach

Generate the following using AI:

A. Cold Email

- Maximum 150 words

B. LinkedIn Connection Request

- Maximum 250 characters

C. One Follow-up Email

- Maximum 100 words

Each message should be personalized for the selected company.

Task 5: AI Lead Scoring

Assign each company a score between **1 and 10** based on:

- AI adoption potential
- Company size
- Digital presence
- Industry relevance

Provide a one-line justification for the assigned score.

Task 6: Reflection

Write a short reflection (300–400 words) covering:

- Which Clay features did you use?
- Which AI prompt gave the best results?
- What challenges did you face?
- How can Clay improve business workflows?
- What did you learn from this assignment?

Submission Guidelines

Submit a single ZIP folder containing:

- Exported Clay Table (CSV or Excel)
- Screenshots of the completed Clay workspace
- Reflection report (PDF)
- Sample AI-generated cold email, LinkedIn connection request, and follow-up email

Part - 2

Complete **any one** of the following:

- Build a second Clay table for **10 universities, NGOs, or startups** and repeat the enrichment workflow.
- Create an additional AI column that summarizes the company's website in **three bullet points**.

- Compare two companies and generate AI recommendations on which one should be prioritized for outreach, along with a brief justification.
